

James Crossman is a Data Centre Design Engineer with PowerHouse Data Centre Group, an Alberta-based company providing design, procurement, construction, and commissioning services for mission critical facilities. James works with multi-disciplinary teams of executives, engineers, project managers, suppliers, tradespeople, IT managers, and facility operators to deliver projects to a broad range of clients.

Prior to this role James spent over ten years as an electrical engineer, shareholder, and director of a medium-sized Edmonton-based engineering firm. He obtained his Bachelor of Science in Engineering degree from the University of Alberta in Edmonton. James excels at bridging communication between technical and business audiences and can effectively distill complex technical concepts.

James believes that projects succeed at the intersection of bold leadership, creative vision, and technical excellence. A life-long Edmonton Public Library customer, James has recently discovered the joy of sharing the Library with his two young children. James is a passionate advocate for public libraries and believes they can play a critical role in helping people from all walks of life succeed
