“There are a lot of great stories in Markham about the virus. Doctors in Markham go to places that the virus is spreading the most, and they tell everybody to stay back from there, but go there to save people themselves. Also in Markham, because the doctors are scared to spread the virus to their families, they sleep in the garage every night, no matter how cold it is, or how hot it is.”

Everybody in this world already knows the Covid-19 virus, and we are all working together as a group, to stop this situation. Just like what the Chinese writer said, he wrote about how the fingers work together, but actually, he is talking about people, that we need to work together. We need to work together, to defeat this dangerous, scary, and deadly virus.

There are a lot of great stories in Markham about the virus. Doctors in Markham go to places that the virus is spreading the most, and they tell everybody to stay back from there, but go there to save people themselves. Also in Markham, because the doctors are scared to spread the virus to their families, they sleep in the garage every night, no matter how cold it is, or how hot it is. A person at the age of 103, has been cured, so that, we can tell that a person so old can be cured, we, Markham, Canada, and every other place in this world, could defeat the virus. Let us work together, and stop this virus.

In the meantime, what do we do at home, and what changed about our daily life? Those who actually weren't born in Canada, and would like to go back to where they lived, would have a problem. We can't go back! The airplane had stopped flying! What if you still have family members in the country where you are born from? Then you can't see your family members, and would have to stay in Canada all summer long, until the virus has stopped. Just like me! This is actually the first time, where I am staying in Canada for

summer! But my other family members are in China, and it is only me and my parents here in Canada. We used Wechat to connect with each other now, and it is actually pretty cool. Someday, maybe you can try it too!

We of course have to stay active at home during this time of year, so before, I always go to school walking, and in recesses, I most likely would run a lot, but now, the I am at home, and can't run at home, I do more dancing, and I jump ropes in my backyard to stay active. I also have experienced that after dinner, if we have time, me and my family would go out to have a nice walk, but now, We are scared to go out everyday, so we just stayed home and played some games instead.

As you can see, Covid-19, have changed our lives a lot. It stopped us from going where we want to go, and changed our routines too. We should work together, like your 10 fingers, and defeat this virus. Let us work together, to help each other in need, and stop this scary period. 2020 is a memorable year, and also a year that we learned an important lesson, which is how to work together as a group.
