“For the graduation my neighbour did like an outside celebration. There were three graduates that came. They got balloons, their car was decorated with their names, they took pictures and basically that was it. They were pretty happy, but I think they would have been happier if there was no pandemic.”

I wake up late and sleep late. I miss going to school. Online Learning has helped me cope through this time. It is still the same we used to call our relatives on the phone anyways so it has no difference. I started to use Discord, an online chatting app. My friends introduced them to me from an online sunday school class. Then it was like a normal thing to do. We have tried going to Berczy park once or twice a week to play tennis and soccer. The rest of the week I bike around my street or go to Berczy and go around one part of it each day. My community from what I have seen and experienced is that they are limiting their time outside. I see people last year everyday they would go on jogs or a run but now I don't see them everyday. For the graduation my neighbour did like an outside celebration. There were three graduates that came. They got balloons, their car was decorated with their names, they took pictures and basically that was it. They were pretty happy, but I think they would have been happier if there was no pandemic. Some people in the community have completely changed, some of them don't even want to come out anymore. So everything is low key from what I have seen. When we go back to school there wouldn't be any change really except the fact that hand washing will be taken to the next level. The first few days it will be pretty quiet, then everything will start forming and normal again. At recess people will try to go out when there are more people in and when there are more people in they will go out. Crowds won't be a thing at school. The teachers' responsibility will get bigger. It will be a stressful year for our respected teachers as this goes on.
